

E—tan HTML Template Docs

E—tan is Premium HTML5 templates, fully responsive with butter smooth animation

Put It Online

After you've downloaded the template you'll probably want to edit the files in order to put you own texts and images into the theme. You will need HTML/CSS skills to do this and a HTML editor like Sublime Text, Notepad++ etc

Assuming you already have your domain and hosting :) you will have to use FTP client software like [FilleZilla](#) to upload files to your server in `public_html` directory.

Now you can access your new website using web address in web browser like Chrome, Firefox, Internet Explorer or Safari.

Responsive Images

E—tan's adaptive images feature creates variants of images you upload to ensure they look great and load quickly on any device. This can help your mobile pages load up to 10 times faster.

```

```

In essence, the above code tells the browser to serve a specific variant (denoted by width) for different media queries.

Images in the package are loading [placeholder.com](#) dummy image. To replace the image simply search for “via.placeholder.com” keyword.

Customizing CSS

Editing CSS can be very tricky until you get the hang of it. I would highly recommend not editing the CSS if you have not used it before. For those that feel like giving it a shot you can go ahead and locate the file at `css/E-tan.webflow.css`. Once again, I strongly encourage you to keep the original file separate for future access. CSS can be very touchy and will break when not coded properly. But at the same time as long as you keep an original copy safe feel free to learn how it works.

SEO Search Engine Optimization

In order to improve your search engine ranking, and thus enable your web site to appear among search results, please don't forget to change the description with your own.

```
<title>E-tan</title>
<meta name="description" content="Premium HTML Templates">
```

As a best practice, the keywords from the meta tag are words that you should use in the texts from the page.

Support

Please remember you have purchased a very affordable theme and you have not paid for a full-time web design agency. Occasionally we will help with small tweaks, but these requests will be put on a lower priority due to their nature. Support is also 100% optional and we provide it for your convenience, so please be patient, polite and respectful.

Support for my items includes:

- Responding to questions or problems regarding the item and its features
- Fixing bugs and reported issues
- Providing updates to ensure compatibility with new software versions

Item support does not include:

- Customization and installation services
- Support for third party software and plug-ins

Before seeking support, please...

1. Make sure your question is a valid Theme Issue and not a customization request.
2. Make sure you have read through the documentation and any related video guides before asking support on how to accomplish a task.

3. Make sure to double check the theme FAQs.
4. If you have customized your theme and now have an issue, back-track to make sure you didn't make a mistake. If you have made changes and can't find the issue, please provide us with your changelog.
5. Almost 80% of the time we find that the solution to people's issues can be solved with a simple "Google Search". You might want to try that before seeking support. You might be able to fix the issue yourself much quicker than we can respond to your request.
6. Make sure to state the name of the theme you are having issues with when requesting support via ThemeForest.

Version History (Changelog)

You can find the version history on template sale page.

Once again, thank you so much for purchasing this template. As I said at the beginning, I'd be glad to help you if you have any questions relating to this template. No guarantees, but I'll do my best to assist. If you have a more general question relating to the themes on ThemeForest, you might consider visiting the forums and asking your question in the "Item Discussion" section.

Changelog

```
-----  
--  
Version 1.0.0 - September 8th, 2019  
-----  
--  
- first release
```
